

## Northrop Grumman Awarded \$95 Million JCREW Production Contract

October 29, 2015

SAN DIEGO, Oct. 29, 2015 (GLOBE NEWSWIRE) -- The U.S. Navy has awarded Northrop Grumman Corporation (NYSE:NOC) a \$95 million contract for low-rate initial production of the Joint Counter Radio-Controlled Improvised Explosive Device (RCIED) Electronic Warfare (JCREW) Increment 1 Block 1 (I1B1).

The contract, awarded by the U.S. Naval Sea Systems Command (NAVSEA), includes options which, if exercised, would bring the total value to \$213 million. Work is expected to be completed by January 2017.

JCREW systems are software-programmable jammers that provide protection from device-triggered improvised explosive devices (IEDs). Northrop Grumman developed mounted, dismounted and fixed-site variants to protect vehicles, warfighters, and permanent structures for the Navy and the U.S. Air Force.

"Prevailing where other companies in the industry faltered, our JCREW team proved this crucial capability – so urgently needed in the field to protect our warfighters against current and emerging threats – could be achieved. Now developed and validated, we couldn't be more elated and gratified JCREW will be deployed next year," said Jeannie Hilger, vice president and general manager, communications division, Northrop Grumman Information Systems.

"The system developed by Northrop Grumman is exceedingly more effective against a multitude of different IED threats than systems currently in the field," added Hilger. "JCREW I1B1 also provides new capabilities that make the system easier to maintain and update for new threats."

NAVSEA notified Northrop Grumman in May that the JCREW I1B1 system had completed initial operational test and evaluation. It previously completed developmental testing, a functional configuration audit and system verification review, resulting in the Milestone C decision to proceed to production.

The majority of production work will be performed in San Diego.

NAVSEA awarded Northrop Grumman the JCREW I1B1 development contract in December 2009 and exercised the contract option in January 2013 to complete development of JCREW I1B1.

Northrop Grumman is a leading global security company providing innovative systems, products and solutions in unmanned systems, cyber, C4ISR, and logistics and modernization to government and commercial customers worldwide.
